Wound Care Pre-test

1. List at least 4 risk factors for developing pressure ulcers.

A) ________________________________
B) ________________________________
C) ________________________________
D) ________________________________

2. A patient has a visible pressure ulcer with drainage and slough. What should be used to clean the wound in order to assess it? (circle all that are true)

A. Hydrogen peroxide
B. Dakins solution
C. Saline solution
D. Potable water
E. Povidine iodine

3. True or False Wet to dry dressing changes should be used for stage II pressure ulcers

4. True or False A healing full thickness pressure ulcer with previously exposed bone (stage IV) with the ulcer now improved to a shallow ulceration with only epidermis/dermis exposed is now considered a stage II pressure ulcer.

5. List at least 4 measures to prevent pressure ulcers

A) ________________________________
B) ________________________________
C) ________________________________
D) ________________________________
